Reduce
Energy Bills**

**Aluminum Reinforcements
for Strength and Security**

**Never Caulk,
Never Putty,
Never Paint Again!**

**Sash captured
in Frame,
Low-E+ Glass**

You CAN... See the Difference.

What a Difference to the value and look of your home,

Increase the Equity in Your Home. Experts agree that high quality, thermal replacement windows such as the Energy Swing recover an average of 75% of the initial investment.

Additionally you can save 25%, 35% or more on your energy bills, depending on the current conditions in your home. The energy efficient Low-E+ glass, Energy Swing patented Sash Entrapped design and computer designed, multi-cavity, low conductivity vinyl construction features will help save you money on your energy and maintenance bills.

Your old windows depreciate the value of your home. Other replacement windows have only thin weather-stripping between you and the elements. Your home is uncomfortable and you're stuck paying higher energy bills. NO OTHER replacement window offers our patented design, which nearly eliminates air infiltration.

What a Difference in Quality!

Energy Swing windows are custom made exclusively for your home. All corner joints in the main frame and sash are fusion welded. High performance glazing and vinyl materials provide superior durability. Clean, narrow lines with equal size sash allow more visible glass and an especially appealing appearance. The high strength, stainless steel balance system offers a lifetime of trouble-free operation. The Energy Swing is engineered for maximum structural integrity and rigidity.

No aluminum reinforcement, inferior raw materials, less durable balance systems, unequal sash sizes, gaps between the frame and the sash...these are just a few of the reasons you'll notice other replacement windows just do not stand up to the quality of the Energy Swing. Other replacement windows may look the same at first glance ...THEY'RE NOT!

A Great Difference in ease of use

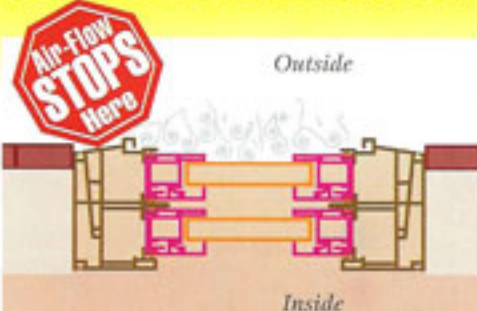

The Energy Swing has an exclusive patented "swing-in" design that other window manufacturers can only dream of having. We know it's better...and you only have to operate these windows a few times to see, feel and appreciate the "swing-in" difference. You can easily maneuver the window to eye-level for cleaning

because it's virtually weightless. The easiest window to clean...ever!

Other window companies are relying on old technology in the design, manufacturing and operation of their windows. The tilt down design leaves a homeowner struggling with the weight of the window during cleaning. To maneuver around the window for appropriate cleaning, furniture and draperies have to be moved out of the way, making cleaning windows a big production and an unnecessarily difficult chore.

What a Difference in design - It blows the competition away!

Our double hung window withstood 210-mph winds and 5 inches of rainfall per hour. The slider withstood 169-mph winds and 5 inches of rainfall per hour! These statistics are incredible! Your windows will probably never

see anything even close to these conditions, but Energy Swing's ability to withstand them is a reflection of its superior design and construction. You can see in these illustrations how the Energy Swing window outperforms the competition. The harder the wind blows, the tighter the weather-strip seals against the track.

You won't find the exceptional features of Energy Swing in any other window. It's patented. Air infiltration occurs easily in the competition's tilt window because there is only weather-stripping to prevent the airflow. Their sash is not entrapped in the frame, making their windows weaker and less resistant to air infiltration, especially over time. The harder the wind blows the less the weather-strip contact and the greater the air infiltration.

Each time you clean... You'll Love the Difference.

Easy eye-level cleaning...
HOW SIMPLE!!!

No More Struggling!

The Best Value is in the Best Window

Energy Swing Windows were engineered from the ground up to be the ultimate in replacement windows. They were not designed to simply replace your current windows. They were designed to resolve problem areas in addition to traditional windows. Like traditional windows, Energy Swing windows can be opened in a traditional fashion to let fresh air into your home, but they offer so much more of cleaning and, whether you are considering a beautiful picture window, double hung windows or the slider windows, you can be sure that the patented designs, trouble free balance system, welded construction, aluminum reinforcement, entrapped sash, and weather-stripping all work in harmony to provide the best quality and performance in a product that will offer you enormous satisfaction for years and years to come.

So, don't just replace your old windows. Make a real difference with Energy Swing, the next generation in value and quality.
